```python
[4]: name = input('What\'s your name?')
     print('Hi '+ name+'!')
```

```
What's your name?marifer
Hi marifer!
```

1 Here's a header

Here's some text with a word in **bold** ## Here's a sub-header *Here's some italic text.* And here * is * a * bullet * list

Shortcuts: * esc to jump to command mode * m to convert the cell to a markdown cell, and * enter to jump back to edit mode. * y to convert back to code

Some useful command mode keyboard shortcuts (in no particular order) are: * a - insert new cell above * b - insert new cell about * c - copy cell * x - cut cell * v - paste cell below current cell * V (shift V) - paste cell above current cell * d d (double click the d key) - delete cell
